World Bank has recently come out with the Logistics Performance Index 2018 (released every two years). Germany again leads the table as #1 with an LPI score of 4.20. Followed by Netherlands, Sweden, Belgium, and Singapore. The LPI scores of high-income countries are 48% higher than in lower-income countries. Logistics is a \$4.3 trillion industry globally. It is the backbone of trade, and good logistics can reduce trade cost and make countries compete globally. Getting logistics right means improving infrastructure, skills, customs and regulations, policies and governance at the right proportion.

The functioning of the logistics sector is the key to the functioning of the European economy. According to the 2018 Global Logistics Index published by the World Bank, eight out of the ten best-performing countries in the logistics sector worldwide are EU countries.

*Data from World Bank

TAPA FSR _ LEVEL A Standards

Transported Asset Protection Association (TAPA) is an association of security professionals and related business partners from high technology and high value companies. Their objective is to address the emerging security threats common to the high value industry supply chain. It unites global manufacturers, logistics providers, freight carriers, law enforcement agencies, and other stakeholders with the common aim of reducing and preventing losses from international supply chains.

Dahua Logistic park and warehouse solution are designed with full reference to TAPA Level A standards, which will help our customer to get the TAPA certification more easily. Also strengthen the security of logistic park and warehouse.

Panoramic Monitoring

Dock Management

Parking Space Management

Entrance & Exit

Entrance and Exit ANPR System

Innovations to Assure High Efficiency of Entrance/Exit Management

With global urbanization and rapid growth of vehicle population, how to manage the security by tight control of Entrance/Exit and at the same time improve running efficiency is one of the topic which concerns every potential Entrance/Exit manager.

Dahua innovative Entrance/Exit solution with embedded ANPR, seamless integration of various technologies like video, VTO and management platform offers you what matters most for Entrance/Exit management

Accurate ANPR algorithm and AI metadata (Vehicle type /Color / Country recognition.)

Vehicle access control: white list and block list

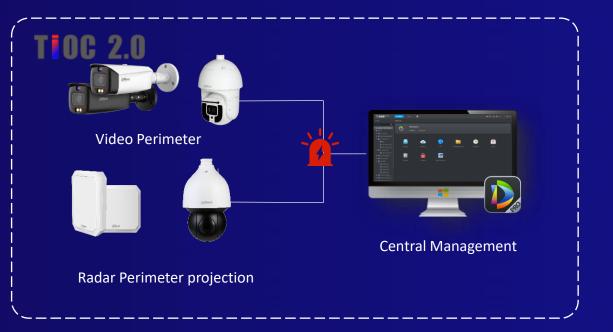

Temporary access permit: Visitor and logistic truck

Perimeter Protection

24/7 Day and Night / All-weather Monitoring

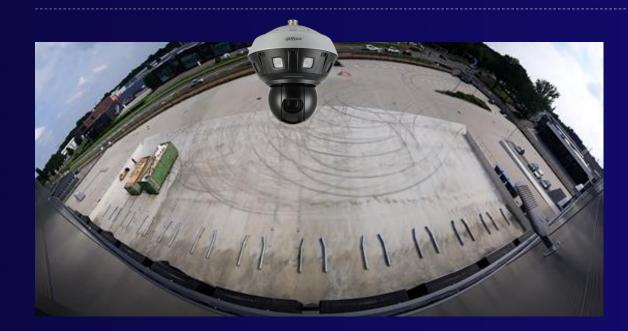

Wide Range / High Accuracy / Low false alarm

False alarm filtering : banners/ leaves/ Balloons

Loading Dock Panoramic Monitoring

Safety at the loading dock is an indispensable aspect of loading dock management. That said, loading dock management doesn't end at safety, because without proper security at the loading dock, you're leaving a vulnerability that can potentially disrupt the operations of the entire warehouse.

Highlights

Wider field of view compared to standard cameras

Eliminate blind spots

 \bigcirc

AI applications : Auto tracking, Tripwire, crowd detection, etc.

Loading Dock Management

Dock Status Detection : Available / Occupied

Logistic Truck Recognition : License Plate / Parking time

Dock Location Guidance : Show available docks to drivers

Internal Loss Prevention

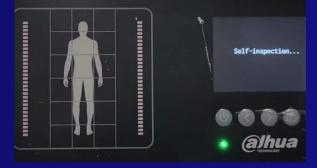

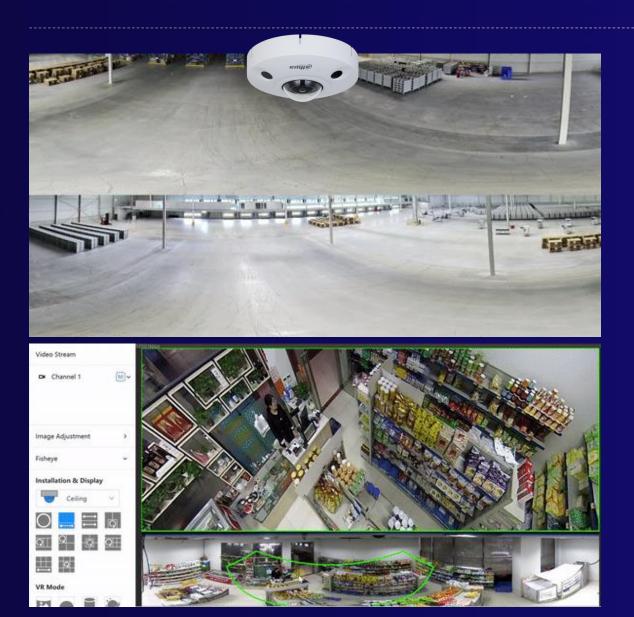

People Counting

Max 18 Zones Alarm

Warehouse Indoor Panoramic

Securing large areas with adequate camera coverage can be challenging, and the use of pan-tilt-zoom (PTZ) cameras often does not suffice in these applications. Panoramic view cameras don't miss anything; a single 180° or 360° panoramic view camera can cover a large area that would require many conventional cameras or multiple PTZ cameras.

HD Fisheye panoramic monitoring wider area

Multiple Display mode : overview or details, your choice

Intelligent add-ons : People counting , Heatmap, etc.

Thermal Fire and Smoke detection

Fire Early Warning

The primary benefit of thermal cameras for fire protection lies in their ability to detect the temperature anomalies that occur just before a fire starts, or if the fire has already started before the smoke can be detected by a conventional smoke detector.

7X24 Detection

Unlike regular video cameras, thermal cameras do not require light to capture an image, making them ideal for use in low-light settings and at night.

Dual Lens (Thermal/Visual)

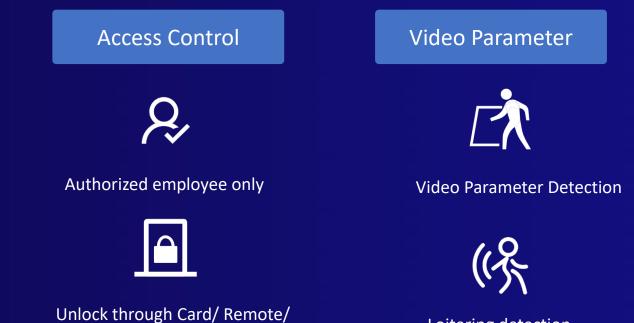

they can be used for fire detection and prevention, security, and equipment monitoring all at the same time, offering a broader spectrum of protection than standard video cameras can provide.

High Value Cage (HVC) Security

Handling specialty and high value inventory is both complex and high risk. With each unit value at over \$100 per pound your supply chain could be storing and protecting millions of dollars in customer assets. The most common types of high value cargo handled by supply chain operations are precious metals, semi-precious stones, electronics, documents and life science/ pharmaceutical inventory.

Password/ Fingerprint*/ Face * OR COMBINATIONS Loitering detection

* Please follow GDPR restrictions.

Inventory Area Monitoring

360° Panoramic & PTZ

360° Panoramic view of the warehouse

Intelligent video analysis : tripwire, parameter, etc.

45x optical zoom and auto tracking.

Internal Dock Doors Monitoring

According to TAPA standard, internal dock doors should be covered with CCTV system ,views of freight being loaded/unloaded at all internal dock doors and dock areas should always clear.

One HD camera could cover 1~2 dock doors without any blind area.

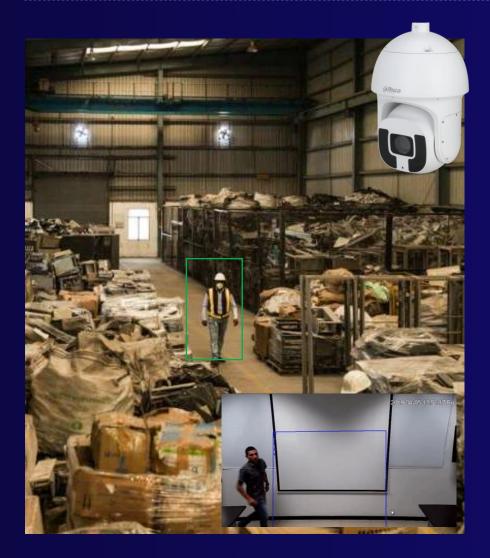

Ture WDR technology up to 120dB could provide clear image at daytime.

r Full Color technology provide color image even in the darkness.

Warehouse Trash Inspection

One of the ways a thief will remove products from the warehouse is to put the product in the trash and recover the stolen property later after the building is closed. This is the main reason for the CCTV coverage on the internal and external main trash collecting bins. TAPA has recognized trash security as being a risk to logistic service providers such as warehouses and transportation companies.

7x24H day and night monitoring : No matter in the daytime or in the darkness evening, Full Color / starlight technology could provide HD video for trash inspections.

Loitering detection : Suspects usually loitering around the trash bins for an opportunity .once the loitering incident detected, an alarm will send to control center.

Auto Tracking : Anyone enter the trash bin area will be tracked and recorded by the camera until he/she left the area.

DSS Pro is a Comprehensive and Expandable VMS. Beside its basic CCTV functions, it also supports GIS map, system maintenance, ANPR, People Counting and etc. You also can extend functions, Traffic, Business Intelligence, Mobile via add-on modules.

- ✓ Advanced VMS: supports special functions, like auto-register, thumbnail search.
- ✓ Add-on modules promote the software value.
- ✓ Openness can satisfy the project integration.
- ✓ Supports distributed system and cascading, it's more suitable for medium and large projects.

Parcel Tracking Project _ GLS Netherlands

GLS is the one of the largest ground-based parcel delivery service providers in Europe. Processes and supply chains are prone to error. Irregularities, broken goods and loading errors are some of the common issues that occur daily. them want to find smart solution to care this.

Solution highlights:

- Keep the entire supply chain and other processes in view.
- Record the status of goods at every point in time and down to the last detail.
- Parcel tracking (Machine vision code scanner).

Benefits:

- ✓ Process visualization provides you with the full picture.
- ✓ Each shipment is recorded at each point, with no gaps, and documented in video images without any additional work.
- Process visualization links video images with scanned codes. Thus, the state of each shipment can be found within seconds.
- ✓ Potential thieves are now aware of our high level of security and are heavily discouraged from committing crimes

Logistic Park and Warehouse Project _ JD Logistics

Distribute center monitorin

house monitoring & Fire proetection

JD Logistics company lately launched their first logistics park in Venray, Netherlands. The warehouse spreads out over a total area of 12000m2, complying with C3 warehouse standard. Dahua, as the total physical security system provide, delivers whole intelligent logistic security solution for this logistics park, including CCTV, access control, transmission network, management platform.

Solution highlights:

- Thermal camera to overheating detection;
- Access control associated to video surveillance camera;
- Perimeter defense based on thermal technique;
- HD Video monitoring covers all important spot inside the warehouse;
- All-in-one management platform for all security devices operation, administration and maintenance.

Benefits:

- ✓ Reliable fire precaution and prevention;
- ✓ Insight of all suspicious intrusion attempt;
- ✓ All-environment proof perimeter protection;
- ✓ Enabling AI-enhanced detection in case of any suspicious motion all the time;

Ingram-Micro Parcel Tracking Project

There is always dispute exists such like commodity missing or damaged when the parcel is delivered to customer. Ingram Micro want to record the commodity in parcel which is passing a fixed point on conveyer belt before delivering to the customer. Once dispute happens, they will generate a box contents statement which contains the snapshot of the commodity for the customer, to prove the parcel is intact before delivered to the customer.

Solution highlights:

- Machine vision camera to scan the barcode.
- 2MP dome camera to record the parcel content.
- DSS to combine barcode/PI number/parcel number/time with video footage and it's able to output package info including a snapshot of parcel content with PDF format.

Benefits:

- ✓ 100% scanning rate and 100% recognition rate.
- ✓ Record the parcel content clearly
- ✓ Thanks to the high performance of hardware and advanced algorithm, the barcode can be recognized with 100% of accuracy.
- ✓ The Ingram Micro LOGISTICS is satisfied with the performance that combines Barcode/PI number/parcel number/time/and parcel content snapshot.
